

Encourage a Fighting Spirit with the Doner Designs Air Force Bass

Description

The Doner Designs "Fight Back" military theme guitars and basses were developed to encourage kids who are fighting life-threatening illnesses as well as the friends and family who support them. These guitars are fully functional and constructed with premium hardware and electronics sure to please any musician, but are also works of art suitable for display for the inspiration of anyone. For new or aspiring players, a headphone amplifier and self-study lesson book are included.

The Air Force theme bass guitar is based on Leo Fender's famous Precision Bass. The body and neck come from a value-priced SX bass guitar. Doner Designs then completely rebuilt the bass by replacing the pickup, hardware and electronics with premium aftermarket components. Two additional pickups and an onboard preamp were added. The two added pickups are similar to those used on a Gibson EB-3 bass. Body routes were added to house the additional pickups, preamp and battery.

The unusual 3 pickup configuration enables the Air Force Bass to emulate the sound of several classic bass designs including the Precision bass (middle pickup only) Jazz bass (middle and bridge pickups) EB-0 (neck pickup only), EB-3 (neck and bridge) and Stingray (bridge only). With all 3 pickups on, the bass has its own unique tone. The onboard preamp and passive bass and treble controls are somewhat akin to those found on G&L basses. Tonal flexibility and control is enhanced by three separate volume controls and on/off switches - one for each pickup.

Aircraft graphics include the Air Force Roundel symbol, USAF stencil lettering and the shark teeth most commonly seen on the famed P-51 Mustang WWII aircraft. In addition, a red covered military switch along with 10 dials and switches give the control panel a cockpit-like feel. The silver and chrome paint scheme and a strap made of seat belt material also contribute to the overall look. A semi-gloss clear lacquer helps protect the lettering and contributes to the rugged metallic equipment look.
